

Specializing in control, network and communications technology for all types of rail vehicles, Selectron Systems AG is a world leader in its field. The flexibility of a medium sized company, coupled with the performance of the Knorr-Bremse Group, make the company an excellent technology partner.

Within the Knorr-Bremse Rail Vehicle Systems (RVS) division, Digital Products Cybersecurity (DPC) is responsible for the overall governance of cybersecurity. To strengthen our team, we are looking for a

Cybersecurity Program Office Manager 80 – 100% (f/m/x) (remote)

Your tasks

- Integrate security verification and validation testing activities into software quality and safety assurance process
- Develop security verification and validation testing plans to ensure that the product's defence in depth and threat mitigation strategies and capabilities are effective
- Determine security verification and validation testing scope, infrastructure, tools and resources to ensure the product security requirements are adequately demonstrated
- Test, validate and verify hardware and/or software products to determine compliance with defined specifications and requirements

Your profil

- Knowledge of security architecture concepts, IACS reference models (e.g. Purdue, Zone and Conduit) and IACS security standards
- Knowledge of penetration testing principles, tools and techniques
- Knowledge of system and application security threats and vulnerabilities
- Skills in secure test plan designs (e.g. unit, integration, system, acceptance)
- Fluent in the English language

What we offer

We offer you an exciting and varied job in an international environment as well as an attractive framework ranging from flexible working time models to professional and personal development opportunities and attractive social security benefits.
